AL Safety Design Ltd enable you to develop superb technology products from reliability, safety and quality point of view by eliminating product liability risks.

AL Safety Design Ltd has developed a **Tool** for auditing your company's Product Reliability Management regarding your *business environment*.

The Reliability Audit is based on a model (see picture), which was developed by surveying 30 top technology companies, including Nokia, Kone, Tellabs, Vaisala etc. The model based audit gives a detailed picture of the level of reliability activities, which are necessary and appropriate for the company's business success, products and customers in their current and future business environment.

Results: the **Audit Report** contains the current level of reliability activities and a list of improvements and recommendations for the management.

Our reliability experts will conduct the assessment in 3 stages:

- Stage 1. **Reliability aspects** of the Product:
- Stage 2. **Audit:** Reliability related Management areas of the organization
- Stage 3. **Final report:** Improvement plan with suggested action

The audit model is based on Reliability Management standards such as ISO 9000-4, including 4 assessment areas: 1) *Management and Strategy - role of reliability*, 2) *Customer orientation - reliability*. 3) *Reliability process and methods* and 4) *Results of Reliability Management*.
